THE CANADA OF TO-DAY

FEW countries have equalled the development of Canada during the past twenty years and the future is full of promise for this vigorous, progressive nation. Her success rests upon firm social, natural, and economic conditions. Her natural resources are enormous, her people are thrifty, ambitious and careful. Her per capita wealth and foreign trade are annually increasing. The visitor who comes to Canada will see a country buoyant with the enthusiasm of youth and will recognize the fact that great possibilities of economic development exist within her borders.

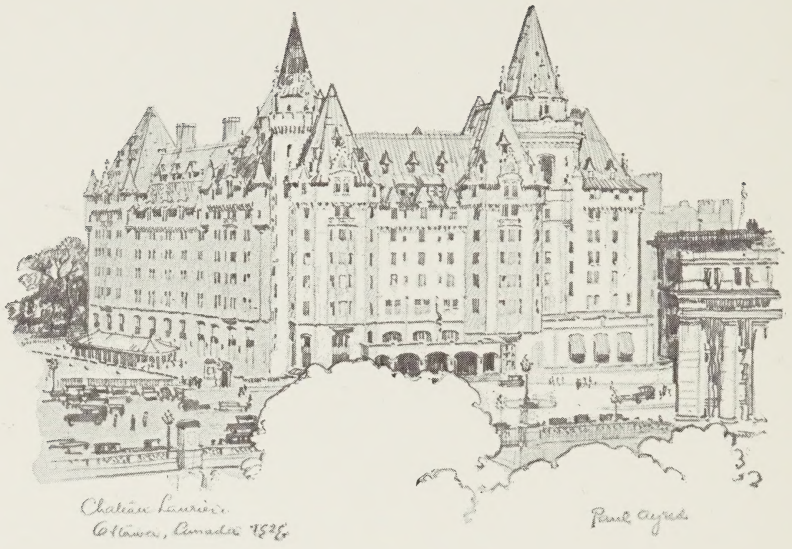
WHY should one visit Canada? Because it offers unique attractions not found elsewhere in America.

It is a land of extensive seacoast where sheltered waters are the delight of the yachtsman and the favourite haunt of big game fish. It is a land of innumerable lakes and rivers, the home of the camper and canoeist. In its snow-capped, glacier-tipped mountains it offers endless opportunities to the mountain climber. To him who is akin with the beauty of nature, it affords wonderful scenes of great diversity—the joy of the artist. Thousands of miles of unsurpassed roadway conduct the motorist through reminiscences of ancient feudal France into the restless activities of modern progressive cities. In a word, so great is the variety of Canada's attractions, that rare, indeed, is the tourist who will not be bounteously rewarded by a visit.



TRAVEL BY RAIL AND WATER

TWO of the world's greatest railways traverse Canada from ocean to ocean, including in their systems lines of ocean and coastal steamships, fleets of Great Lakes and river steamers, and chains of large, perfectly appointed modern hotels from Atlantic to Pacific having the highest standards of service. Commodious steamers ply the St. Lawrence to its famous resorts and hotels. And if one desire life in primeval untouched nature, comfortable summer hotels and forest camps have been established in the lake-forest regions of eastern Canada where one may enjoy the delights of canoeing and fishing while breathing the pine-laden perfumes of the forest. And, again, in the fastnesses of the great western mountains, there are large modern hotels and summer camps, furnished with all the accessories of comfort, where the sight of mystically-beautiful lakes surrounded by towering mountain heights crowned with glaciers of many hues, delight the wondering gaze.

MOTORING

THE automobile affords opportunities for seeing Canada in detail and the best of motor roads throughout the country enable one to visit sequestered regions of great interest and beauty: Maritime Provinces and Quebec with their historic reminiscences, ancient chateaux and attractive farms; Ontario with its agricultural and industrial activities; the boundless plains of central Canada, one of the world's granaries; and, again, the lofty mountains of the Pacific green in forest growth to the snow line. Every facility of visiting Canada is offered by the authorities and service-stations, camp-sites, and hostelries abound everywhere.

CANOEING AND CAMPING

CANADA is the land of the canoeist, by river and by lake. There is, literally, no limit to the opportunities offered for a sojourn in the wild forest-clad lakes of Canada, where the peace of nature prevails, the secret homelands of the moose and the beaver, where one may listen to the orchestra of the thrush, the winter wren and the kinglet. And the summer climate of these northern lakes and streams is always invigorating, the air always of the purest. Guides are readily procurable in all parts and outfitters will supply all equipment.

MOUNTAINEERING

MANY Switzerlands are embraced in the extensive mountains of Western Canada. Majestic ranges, scarred by age and weather, rear their stately summits against a sky of purest blue or bury their snow-capped peaks in fleecy clouds. Here are motor highways and mountain trails through vistas of entrancing beauty. Each mile opens an entirely new panorama. Each moment reveals a new picture and each picture is a surprise and inspiration. The national parks of the Canadian Rockies are justly famed the world over for their treasures of wonder and beauty, and the authorities of the parks provide every facility for traversing the trails to mountain peaks whence gorgeous views are seen. The amateur or the experienced mountain-climber will each find here ample test of skill and endurance.

HUNTING

IN the forest lands of Canada dotted with multitudes of lakes, in the marshy flats of lowlands, along the shores of its inland seas, and far up in the mountain strongholds of the west, there exists abundance of game for the hunter. Grizzly, black and cinnamon bears, the lordly moose, elk and caribou, the rugged mountain goat and the big horn sheep, with many other smaller but often dangerous animals, invite the hunter who seeks real sport not devoid of the elements of danger and requiring much exertion. For him who prefers game-bird hunting, the natural feeding grounds of geese, ducks and other land and water game are found throughout Canada. Excellent sport in the lawful seasons awaits the hunter.

FISHING

SUCH a variety of salt and fresh water angling exists in Canada that the taste of every fisherman is easily satisfied. Along the shores of Nova Scotia there is the great tuna weighing several hundred pounds, a real conquest for the rod and reel; there is the mackerel shark for those who enjoy the sport of harpooning, and the sword fish and great numbers of smaller sea fish. The salmon of New Brunswick and of the north shore of the St. Lawrence are famous. The ouananiche, lake and brook trout, the black bass, maskinonge, pike and pickerel, of Ontario and Quebec; the famous spring and silver salmon of British Columbia with the beautiful Rainbow, Dolly-Varden and other varieties of trout in that province—all provide endless attraction to the sportsman.

WINTER SPORTS

NOT in summer alone does Canada provide for the tourist, for the popular interest in winter sports is steadily increasing. The healthful, invigorating climate of the Canadian winter, the beauty of snow-clad forests and fields and ice-bound rivers and lakes, appeal to the young and strong. Skiing, snow-shoeing, tobogganing, skating and hockey, draw their thousands into the open in search of health and manly sports. Winter season brings the Canadian carnivals with their gay attire and joyful merriment, their toboggan and dog-team races and other national sports. Canada in winter is a country new in beauty and life to many.

The Natural Resources Intelligence Service, Department of

THE Natural Resources Intelligence Service of the Department of the Interior, Ottawa, supplies detailed information regarding the resources and opportunities in any section of the country. It issues a large selection of economic and geographical maps and many publications dealing with the resources of the various provinces. It maintains a library of photographs of all national activities and issues popular lectures illustrated with lantern slides. Enquiries always receive the careful attention of a skilled staff of experts.
